DETAILED ACTION

Allowable Subject Matter

Claims 1-10 are allowed.

The following is an examiner's statement of reasons for allowance:

Applicant's claimed invention distinguishes over prior art for the following reasons. The claims are allowable over prior art of record because none of the references, either alone or in combination, disclose or renders obvious a light modulation medium in which the **cholesteric liquid crystal orientation is moved from a planar state to a focal conic state of a first modulation layer to that of a second layer is not less than .3 and the ratio of the dielectric constant in a planar state of liquid crystal orientation of the first light modulation layer to that on the second is not less than 4.**

US Patents 6618102 and 6034752 do teach a light modulation medium comprising a light modulation element having a pair of substrates and a plurality of light modulation layers arranged between the substrates to form a multilayer structure and made of cholesteric liquid crystal adapted to change the electro-optic characteristics in response to the application of a predetermined field. Prior art also teaches larger differences in the driving voltages for stacked devices with each stack dedicated to a specific color (red, blue, and green).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
